

Study Overview

The flow diagram below outlines how active participation in this study will not disrupt the management of patients with undiagnosed renal masses.

Expected Patient Management

Patient with undiagnosed renal mass found on abdominal imaging evaluated by urologist.

Urologist arranges for renal biopsy for histopathological diagnosis.

- Identifies patient as suitable candidate for study and notifies principle investigator.

Renal biopsy performed.

Histopathological diagnosis of biopsy core samples.

Trial Intervention

Participant contacted and information provided.

Consent obtained.

^{99m}Tc -sestamibi SPECT/CT imaging performed at Envision medical centre.

Comparison of radiological findings from ^{99m}Tc -sestamibi SPECT/CT imaging with histopathological diagnosis.
